

Press Release

Franz Kamhuber - New Business Development Manager Aerospace ViscoTec is expanding its sales network and guarantees an excellent service for customers and partners, especially for applications in the aerospace industry

The Bavarian company, ViscoTec Pumpen- u. Dosiertechnik GmbH, is a specialist provider of solutions for precision dosing technology tasks and highly repeatable dosing processes in the fully automated industrial production. In his position as Business Development Manager Aerospace, Franz Kamhuber strengthens the sales team in order for Viscotec to continue providing the best possible service.

The high demand from emerging markets for aircraft, as well as the enormous backlog from large aircraft manufacturers, requires a significant increase in the rate of production on the part of both OEMs and suppliers. Shorter production cycles and automated solutions are essential in the aerospace sector. It is in this field that ViscoTec significantly benefits, with its accumulated project experience in the highly automated automotive industry.

Difficult to process materials that have been primarily designed for manual processes and now require a (semi-) automated function, represents an approach that ViscoTec GmbH has taken. "On-demand" filling tasks, the production of seal caps, the bonding of structural components, Shim applications and the casting of honeycomb structures have all been successfully resolved in the past.

"We are expanding our sales team in this division to be able to respond to the ever increasing demand for applications in the aerospace industry. We will be able to support our customers further with our concentrated knowledge in this area. We are very happy to have Mr Kamhuber on board and are convinced that his experience and knowledge will be of great benefit to us in the future." explains Georg Senftl, Managing Director of ViscoTec GmbH.

ViscoTec - Perfectly dosed!

ViscoTec primarily deals in systems required for conveying, dosing, applying, filling and emptying medium to high-viscosity media. The headquarters of the technological market leader is in Töging (Upper Bavaria, in the district of Altötting). In addition, ViscoTec has subsidiaries in the USA, in China and in Singapore and employs about 120 people worldwide. Many traders around the world extend this international distribution network. In addition to sophisticated solutions even in the most complicated tasks, ViscoTec offers all components for a complete application from one source: from procurement, through to product preparation to dosage. This guarantees a successful interaction of all components. All fluids with a viscosity of up to 7.000.000 mPas can be conveyed and dosed almost pulsation-free and with extremely low pressure. For each application there is comprehensive consultation - and where necessary in collaboration with the customer - extensive tests are carried out. ViscoTec dosing pumps and dosing systems are optimally adjusted to the respective application: in food applications, in the automotive, aerospace, medical, pharmaceutical and in many other industries.
